Divakar Putta

AI Engineer

divakar.putta.dvr@gmail.com 9441037230 Hyderabad, Telangana LinkedIn Profile
Github Profile

PROFESSIONAL EXPERIENCE

AI Engineer skilled in developing machine learning models, preparing datasets, evaluating model performance, and integrating AI capabilities into applications. Proficient in Python-based ML workflows, AI agents, LLM integration, and API development. Strong problem-solving and analytical skills, with a focus on building practical AI solutions.

EDUCATION

Vishlesan i-Hub,IIT Patna, in collaboration with Masai 03/2026 – 09/2026
Certification Program in Artificial Intelligence & Machine Learning

Sri Venkateswara University ,Tirupati 08/2018 – 11/2020
Master of Business Administration

SKILLS

- **Programming Languages:** Python, SQL
- **Machine Learning:** Classification, Data Preprocessing, Feature Engineering, Model Training, Model Evaluation
- **AI & LLM Development:** AI Agents, LLM Integration, Prompt Engineering, API-Based AI Applications, LangGraph
- **Frameworks & Libraries:** Streamlit, Pandas, NumPy, scikit-learn
- **Voice AI & API Integration:** ElevenLabs, REST API Integration, Backend API Testing
- **Deployment & Development Tools:** Render, Git, GitHub, VS Code, Jupyter Notebook, Python Virtual Environments

PROJECTS

ZEPTO AI/ML CAPSTONE | Python | Scikit-learn | LangGraph | ChromaDB | FastAPI

- Built three integrated modules covering web scraping, data processing, machine learning, and AI-powered customer support.
- Scraped and cleaned book data using Requests, BeautifulSoup, and Pandas; converted GBP prices to INR and stored processed data in SQLite for SQL analysis.
- Performed Titanic dataset EDA, missing-value handling, outlier analysis, and classification using Logistic Regression, Decision Tree, and Random Forest; compared class-weight balancing and SMOTE.
- Developed a local RAG-based Zepto policy assistant using Sentence Transformers, ChromaDB, and LangGraph to retrieve relevant policy content and route user queries.
- Exposed the assistant through FastAPI with Pydantic response validation and packaged the application using Docker for deployment. GitHub Link

AI VOICE CUSTOMER SUPPORT AGENT | Python | Groq | ElevenLabs | FastAPI | Streamlit

- Developed an AI-powered voice customer support agent to answer customer queries through a conversational interface.
- Integrated Groq-based LLM capabilities to process customer questions and generate relevant responses.
- Integrated ElevenLabs for AI voice interaction, enabling spoken responses for a more natural customer support experience.
- Connected the application components through APIs and tested backend endpoints to verify request handling and response generation.
- Built a user-facing interface and configured backend deployment on Render to make the AI support service accessible.
- GitHub Link s Lives

CERTIFICATE

Certificate of Total Engagement — Artificial Intelligence and Machine Learning

OpenAI Academy – AI at Work | Pathway Completion Certificate | 2026

Fundamentals of AI — CloudML

Machine Learning Certification — CloudML
